

EXAMEN EXTRAORDINARIA 2021-2022
PROBLEMA 4

$$f(x, y, z) = (x + y - z, x + y + 2z)$$

a) DETERMINAR $M_{B'B}(f)$ CONSIDERANDO $B = \{(1, 1, 1), (1, 0, 1), (2, 0, 0)\}$ ^{Partida}
^{Llegada} $B' = \{(2, 1), (1, 0)\}$
 $M_{B'B}(f)$ = coordenadas de las imágenes de los
vectores de la base B expresadas en la B'

$$f(1, 1, 1) = (1, 4); f(1, 0, 1) = (0, 3); f(2, 0, 0) = (2, 2)$$

Logro las imágenes de los vectores, las necesito en B'

$$(1, 4) = \alpha(2, 1) + \beta(1, 0) = \begin{cases} 1 = 2\alpha + \beta \rightarrow \beta = -7 \\ 4 = \alpha \end{cases} \quad (4, -7)_{B'}$$

$$(0, 3) = \alpha(2, 1) + \beta(1, 0) = \begin{cases} 0 = 2\alpha + \beta \rightarrow \beta = -6 \\ 3 = \alpha \end{cases} \quad (3, -6)_{B'}$$

$$(2, 2) = \alpha(2, 1) + \beta(1, 0) = \begin{cases} 2 = 2\alpha + \beta \rightarrow \beta = -2 \\ 2 = \alpha \end{cases} \quad (2, -2)_{B'}$$

$$M_{B'B}(f) = \begin{pmatrix} 4 & 3 & 2 \\ -7 & -6 & -2 \end{pmatrix}$$

b) OBTENER BASE DE KOLT EN B Y DETERMINAR LAS COORDENADAS
DE LOS VECTORES DE DICHA BASE EN BASE CANÓNICA

$$x + y - z = 0$$

$$x + y + 2z = 0$$

$$3z = 0 \rightarrow z = 0$$

$$y = -x$$

$$\ker(f) = \{(x, -x, 0) \mid x \in \mathbb{R}\}$$

$$\text{Base} \rightarrow \{(1, -1, 0)\}$$

Expresarla en base B y luego de esa base a la canónica

$$(1, -1, 0) = \alpha(1, 1, 1) + \beta(1, 0, 1) + \gamma(2, 0, 0)$$

$$1 = \alpha + \beta + 2\gamma \rightarrow 1 = 1 + 1 + 2\gamma ; \gamma = \frac{1}{2}$$

$$-1 = \alpha$$

$$0 = \alpha + \beta \rightarrow \beta = 1$$

$$(1, -1, 0) = \left(-1, 1, \frac{1}{2}\right)_B = \left(-1, 1, \frac{1}{2}\right)_{BC}$$

$$c) g: \mathbb{R}^2 \rightarrow \mathbb{R}^2 \quad g(x, y) = (x+y, x-y)$$

$$h = g \circ f ; \text{ CALCULAR DE DOS FORMAS DISTINTAS } h(1, 1, -2)$$

$$\begin{aligned} h(x, y, z) &= g(f(x, y, z)) = g(x+y-z, x+y-2z) \\ &= ((x+y-z) + (x+y-2z), (x+y-z) - (x+y-2z)) \\ &= (2x+2y-z, -z) \end{aligned}$$

$$h(1, 1, -2) = (2(1) + 2(1) + (-2), -3(-2))$$

$$= (2, 6)$$

* MATRICIALMENTE EN BASES CANONICAS

$$\begin{pmatrix} 1 & 1 \\ 1 & -1 \end{pmatrix} \begin{pmatrix} 1 & 1 & -1 \\ 1 & 1 & 2 \end{pmatrix} \begin{pmatrix} 1 \\ 1 \\ -2 \end{pmatrix}$$

$$= \begin{pmatrix} 2 \\ 6 \end{pmatrix}$$

EXAMEN FINAL 2022-2023

PROBLEMA 1
